TITLE: Methods and compositions for the production of stably transformed, fertile monocot plants and cells thereof

INVENTOR (9):Walters; David A.INVENTOR (10):Walters; Donald S.

CLAIMS:

1. A process for producing a product for animal or human consumption comprising: a) providing a fertile transgenic Zea mays plant comprising heterologous DNA encoding one or more preselected proteins, RNA transcripts or mixtures thereof, wherein said DNA is heritable, comprises a selectable marker gene, and comprises a DNA sequence encoding a fatty acid desaturase, so that the transgenic plant exhibits altered oil quantity or quality as compared to the corresponding untransformed maize plant that does not comprise said DNA, b) cultivating said transgenic Zea mays plant; and c) preparing a product for animal or human consumption from said plant.

Jul 14, 1992

DOCUMENT-IDENTIFIER: US 5130061 A

TITLE: Process for the extraction of polyunsaturated fatty acid esters from fish oils

INVENTOR (2):

Di Fulvio; Walter

Brief Summary Text (5):

Among these, particularly important are the long chain members of the .omega.-3-family, i.e. eicosapentaenoic (20:5.omega.-3) or EPA and docosahexaenoic (22:6.omega.-3) or DHA acids, derivating from desaturation and elongation of .alpha.-linolenic acid, thanks to the intervention of the related enzymes (.DELTA.-desaturase).

Brief Summary Text (8):

Recent studies evidenced a decrease in .DELTA.-6 desaturase in man as the age goes on (after 35 years); said phenomenon causes thus an endogenous lack in the above mentioned acids, which therefore should be administered through diet or by means of suitable compositions. However, various practical difficulties opposed up to now a wide use of said acids in therapy or as alimentary integrators, which use on the other hand should be highly desirable, in view of the above reported biochemical and pharmacological considerations.
